*Education and Resiliency through Horticulture*

## Terrace planting and farewell party..

This week marked the end of the fall semester EARTH program and the beginning of a productive and educational historic terrace garden. The 9th grade led the planting force and spent an afternoon installing native plant species and raised bed planters called “conucos” from the native Taino culture that once inhabited these islands. Other classes utilized an abundance of fresh basil for a pesto taster. Linley did a stellar job presenting her plans to the GHS board and Karie’s final terrace design is taking root. Our “surprise” patio party was a great end to the semester!

Week of November 14th-18th, 2011
